EDUCATION

Shanghai Jiao Tong University

School of Artificial Intelligence

GPA: 4.1/4.3 (Ranked 2 out of 66)

Score: 93.9/100

Shanghai, China

09/2024 - present

Scholarships:

- National Scholarship (2025) (2 of 62)
- Zhiyuan Honor Scholarship (2024, 2025)
- "Han Ying Ju Hua" Scholarship (2025, 15 per year.)
- SJTU Undergraduate Excellence Scholarship (2024)

High graded courses:

- Comprehensive Programming: 100
- Prob. and Statistics (Honor): 100
- Algorithm Design: 100
- Numerical Analysis: 100
- Linear Algebra (Honor): 98
- C++ Programming Design (Honor): 98
- Fundamentals of Artificial Intelligence (ML, DL and RL): 98

22 courses achieved A/A+ (14 A+), including all major-related courses.

RESEARCH

My research interests lie in building **General Self-Evolving Agentic AI**, dedicated to pushing the boundaries of intelligence for autonomous agents. Currently undergraduate researcher in **MAGIC** (Multi-Agent Governance & Intelligence Crew), supervised by Prof **Siheng Chen**.

InfoMosaic-Bench: Evaluating Multi-Source Information Seeking in Tool-Augmented Agents

ICLR 2026 Poster (3rd Author)

✗ [arXiv: 2510.02271](https://arxiv.org/abs/2510.02271)  [Info-Mosaic](#)

Pioneered **InfoMosaic-Bench**, the first benchmark dedicated to multi-source information seeking in LLM agents, demonstrating the critical need to integrate general-purpose web search with thousands of domain-specific tools via **MCP** (Model Context Protocol). Experiments revealed that web information alone is insufficient (GPT-5 Acc: 38.2%) for information seeking due to incorrect tool usage/selection.

MCP-Persona: Benchmarking LLM Agents on Personalized MCP Tools and Tasks

ICML 2026 Poster (Co-first author)

✗ [arXiv: 2606.02470](https://arxiv.org/abs/2606.02470)  [MCP-Persona](#)

Pioneered **MCP-Persona**, the first benchmark for evaluating LLM agents on **personalized** Model Context Protocol (MCP) tools. MCP-Persona captures real-world challenges of tools interacting with individual accounts and local databases across diverse platform including Reddit, Xiaohongshu, Lark, and Slack. Extensive evaluations of state-of-the-art agents reveal substantial deficiencies in personalized tool utilization.

DataMaster: Data-Centric Autonomous AI Research

Incoming submission for NIPS 2026 (Co-first author)

✗ [arXiv: 2605.10906](https://arxiv.org/abs/2605.10906)  [DataMaster](#)

Proposed and developed DataMaster automating external data discovery, selection, and cleaning to enhance ML and post training tasks. Designed a system combining tree-structured search, shared data pool to navigate open-ended search spaces and carry global memory across branches. Successfully boosted the MLE-Bench Lite medal rate by 32.27% and surpassed the instruct model on PostTrainBench (GPQA: 31.02% vs. 30.35%).

AppCopilot: Toward General, Accurate, Long-Horizon, and Efficient Mobile Agent

🔗 [OpenBMB/AppCopilot](#) (300+ stars.)

Developed **AppCopilot**, a multi-modal, multi-agent on-device assistant that addresses core challenges in the mobile-agent landscape. AppCopilot significantly improves generalization, on-screen interaction accuracy, and long-horizon task completion, while optimizing performance and efficiency on mobile devices.

TECHNICAL PROJECTS

AlphaBuild: Generating Formulaic Alphas on a Wider Range of Stock Data with Reinforcement Learning

Leading AlphaBuild as the final project of course **AI1803**, an RL-based methodology using PPO to optimize factor mining process based on [AlphaGen](#), achieving superior backtest performance by leveraging smaller, parallel factor pools and PCA for final factor selection.

IntelliSearch: Unifying Search, Empowering Action for Tool Calling Autonomous Agents

🔗 [SJTU-SAI-GeekCenter/IntelliSearch](#)

Core contributor of **IntelliSearch**, an MCP-rooted search agent evolved into a decoupled, lightweight infrastructure for the Agentic ecosystem. By unifying context memory, dynamic tool scheduling, and multi-agent communication, it provides developers with a perfectly balanced and adaptable framework.

Open Source & Community Contributions

<https://xiyuanyang-code.github.io>

<https://sjtu-sai.github.io/SAI-Community/>

Initiator and core contributor of **SAI Community**, the first student-led high-quality information aggregation forum at SJTU-SAI, fostering knowledge sharing within the academic community. Concurrently, I maintain a **technical blog** featuring 150+ articles (480k+ words) on computer science and AI, and actively contribute to open source via 30+ GitHub repositories.

SKILLS

Programming Languages: Python (Proficient), C++ (Proficient), Rust, JavaScript, HTML, CSS.

Tools: Git, L^AT_EX, Shell, Docker.

Python Modules: Torch (Proficient), Numpy, Pandas, Matplotlib, BeautifulSoup, FastMCP, etc.

ML & DL: Familiar with Deep Learning architectures and model training techniques.

LLM & Agents: Familiar with core architectures for Large Language Models (post training) and agentic frameworks.

Languages: Chinese (native), English (CET-6: 584).

AWARDS AND CERTIFICATIONS

Challenge Cup Competition for "Unveiling the List and Appointing the Best" Defender	2025
Honorable Mention in MCM	2025, 2026
National Scholarship (2 of 62)	2025
Zhiyuan Honor Scholarship	2024, 2025
"Han Ying Ju Hua" Scholarship (15 per year)	2025
SJTU Undergraduate Excellence Scholarship	2024
